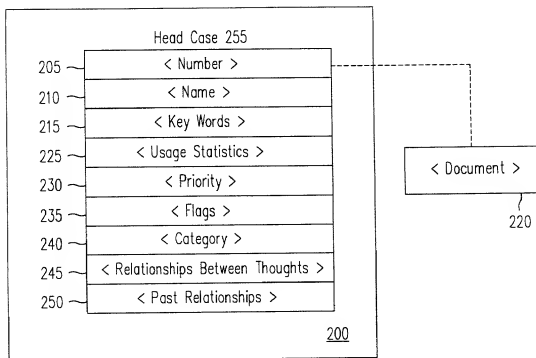

FIG. 2

Diagram illustrating a 'Properties' dialog box (710) for a document titled 'Cortex'. The dialog box contains fields for 'Key Words', 'Category', and 'Time Information'. The 'Key Words' field contains the text 'software brain metaphors thoght innovative'. The 'Category' field is a dropdown menu showing 'Company'. The 'Time Information' section displays 'Created: May 30, 96, 09:57:13 PM' and 'Modified: May 30, 96, 09:57:13 PM'. Below this, it shows 'Total Time: 0 days, 01.06.59' and a 'History' button. An 'OK' button is at the bottom.

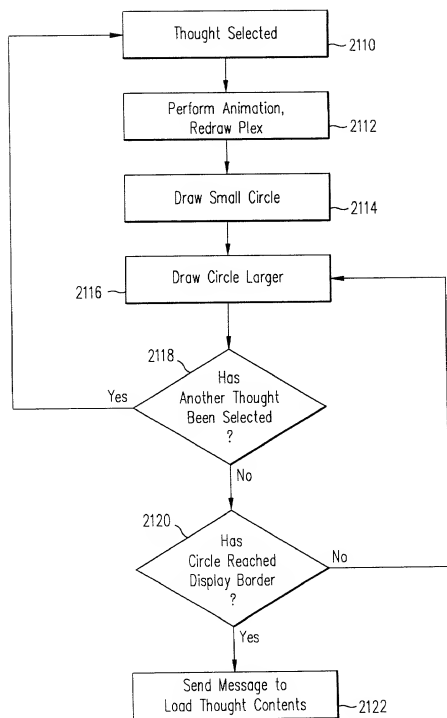

FIG. 22

Algorithm for drawing the plex with distant thoughts

1. Create a list of thoughts to be drawn and their on screen locations:
 2. Add the central thought to the list.
 3. Add children to the list.
 4. Add parents to the list.
 5. Add jumps to the list.
 6. Add siblings to the list, checking first that they are not already on the list.
 7. Add distants of children to the list, checking first that they are not already on the list.
 8. Add distants of parents to the list, checking first that they are not already on the list.
 9. Add distants of jumps to the list, checking first that they are not already on the list.
 10. Add distants of siblings to the list, checking first that they are not already on the list.
11. Draw the lines that connect each thought:
 12. For each item in the list:
 13. Get each item in the list:
 14. If the two items are related, draw lines between them from and to the appropriate gates.
15. Draw the distant thoughts:
 16. For each item in the list:
 17. If it is a distant thought, draw it.
18. Draw the other thoughts:
 19. For each item in the list:
 20. If it is not a distant thought, draw it.

FIG. 23

line connects the method for searching thoughts
 lines to find a route from nSrc to nDest other than a direct relation
 returns TRUE if found
 boolean Search(int nSrc, int nDest)

```
{
    //create the lists
    ThoughtList posList;    list of thoughts that possibly connect
    ThoughtList notList;    list of thought that do not connect
